Product description

Table tops in different lengths and finishes rest between side walls and containers.

Tops

The tops are made out of veneered or lacquered high density chipboard. They are 20 mm thick. Together with the edgings lengthside they reach a thickness of 60 mm. The tops are strictly veneered crosswise. The veneer runs continuously down the edging. The tops cover the cross piece framework which connects the side panel and the container. The article number and the price of the top already contain the proper cross piece framework.The central cross piece integrates the horizontal wire conduit. The return tops include also a horizontal wire conduit.

Meeting table

The tops of the meeting tables are made out of veneered or lacquered high density chipboard. They are 40 mm thick. The tops are strictly veneered crosswise. The veneer runs continuously vertical down the edging.

Side panel

The side panel is made of 12 mm thick aluminium. It is lacquered matching the containers in the colours aluminium silver (RAL 9006) and aluminium grey (RAL 9007). The side panel is fitted with 2 adjustable chrome-plated glides for uneven floors.

Container

Containers are either fixed to the table top or mobile containers which can be placed under the table top. Optionally freestanding containers are available. The connection fittings are omitted, but CPU -containers require openings for ventilation. Containers are made of MDF. They are lacquered in the colours aluminium silver (RAL 9006) and aluminium grey (RAL 9007). Drawers and extensions are opened by means of a moulded groove which serves as a grip handle.

Containers are available in rh and lh. A rh container has the grip handle and the lock on the lh side. A lh container is the opposite way.

Drawers have metal frames, coated in aluminium colour (RAL 9006). All of them are fully extendable with soft self-closing.

Containers are fitted with a locking device. Compartments and extendable shelves for computer equipment are not lockable for security reasons.

Table heights

Desks and side returns are offered in the heights of 73 cm (legroom 67 cm) and 75 cm (legroom 69 cm). Side panels are available in both heights. Containers with height of 73 cm and 75 cm are corresponding units. The 75 cm container gets in addition a plinth of 2 cm. Meeting tables are offered 73 cm high.

Wall panel

The wall panel is offered in two widths. The finish of the wall panels is veneered or lacquer high gloss white. The shelves may be chosen in surface lacquer aluminium silver or lacquer aluminium grey. At the assembly the shelves will be fixed flushed or overlaying at sidewise for 30 cm as maximum. The panel is fixed at the wall using four suspension points. The client assumes responsibility for statics of the wall as well as for the affixing of the panel at the wall. The delivery includes standard dowels and screw hooks for massive concrete walls or brickworks.

Highboard/Credenza

Each highboard/credenza element must be fixed between side panels. The base element requires two side panels, each added element requires only one side wall. If desired, doors and extensions (only for credenza) with a lock are available. Highboard/Credenza with visible backside is deliverable for additional charge.

Power box

The power box is installed in the table top. The power box 277 allows access to the horizontal wire conduit at the central cross piece. The built-in position is shown on page 42. The electrical boxes 276 and 278 have their own casing and can be installed at any position in the table. Both power boxes contain the power strip 284 with 3 sockets and 2 RJ45-sockets. The power strip is available in two versions, either 4 sockets, or 3 sockets and 2 RJ45-sockets.

Sliding leather desk pad

The leather desk pad contains a pencil tray, two compartments DIN A 4, 3 sockets, and 2 RJ45-sockets. Furthermore, there is enough space for cables and a power adapter for a laptop. An outlet for cables is situated top left at the sliding leather desk pad.
