Product description

STAR

is a modular system for the workplace. Interesting tabletop shapes rest on an organically styled base. Elegant containers and highboards offer storage space as well as all the necessary functions.

Table tops

The tabletops have an MDF core. Veneered tops are 31 mm thick, white structure lacquer tops are 28 mm thick. Corners are rounded. A 13 mm thick veneer edge merges into a bevel (lacquered MDF) angled 13° toward the center. Tabletops are rectangular or freeform; other shapes and sizes are available upon request.

Frame

The self-supporting steel frame comes finished in chrome-plated, chrome black, lacquer white or black. Other colors are available upon request. The attachment plate and upper frame are generally coated black. The frame comes in standard table heights of 73 cm and 75 cm. Table legs have black plastic gliders. Horizontal cable management is facilitated by a black metal cable conduit fitted to the upper frame. The vertical cable guide R 43 matches the frame and attaches to the side of it.

Mobile container

Mobile Containers are offered in lacquer aluminium silver, lacquer black metallic, lacquer brown metallic and lacquer structure white. The 1,5 cm projecting end of the front pieces of the drawers serve a grip handle for opening the drawers and file extensions. The mobile containers are provided with damped self-closing drawers, automatic drawer stop and central locking.

Rh and lh mobile Containers are available. The projecting ends of the drawer front pieces of a rh mobile container are on the left side.

The castors of the containers are partly hidden. Both castors in front are fixable.

Container

Containers consist of a corpus and a front panel. The corpus is available in lacquer aluminium silver, lacquer black metallic, lacquer brown metallic and lacquer structure white. The transition from the top and base to the side panels is rounded with a 19 mm radius, as are the edges of the front panel, which are finished to match the tabletop.

Doors and full-extension drawers can be opened with a gentle push. Black height-adjustable glides (Ø 55 mm) support the base panel with 25 mm clearance.

Generous cable apertures in the base panel also assure adequate air inflow. Containers with a computer compartment are also fitted with two ventilation grilles in the back panel. We recommend paying careful attention to equipment manufacturers' instructions regarding the ventilation requirements of electronic devices.

The deep drawers can also accommodate a printer. Printer cables should be clipped into the preinstalled cable brackets.

All containers are available with locking mechanism. The lock cylinder is positioned in the top right corner of the front drawer panel. If doors are hinged on the right, the lock is on the upper left, and vice versa. All units supplied in one order are fitted with identical locks.

Lidded compartment

The container top can be fitted with an integrated compartment for a laptop. The flip-up lid (480 x 413 mm) opens via a hydraulic spring in response to gentle pressure.
The compartment must be positioned above the drawer area. It replaces the top drawer completely, although the front panel of the inoperable drawer remains.

The laptop compartment contains a power strip with three outlets and two RJ45-sockets. Ventilation is provided by means of cable pertures in the base panel, openings in the laptop compartment, and two ventilation grilles in the back panel of the container. We recommend paying careful attention to equipment manufacturers' instructions regarding the ventilation requirements of electronic devices.

Power box

The lid of the power box is set flush with the tabletop and finished in the same wood veneer or in structure lacquer. A 17 mm cutout accommodates cables.

Power strips

All power strips come fitted with a GST18 power input/output. The length of cable is 2,90 m. Cables for connecting two or more power strips, as well as other options for outfitting power strips, are available upon request.
The power strip R 45 is designed to be installed to the upper frame or in a container.
